

Frank Curzio's

FRANKLY SPEAKING

**Announcer:**

Wall Street Unplugged looks beyond the regular headlines heard on mainstream financial media to bring you unscripted interviews and breaking commentary direct from Wall Street right to you on Main Stream.

Frank Curzio:

Let's go on out there. It's June first, and I'm Frank Curzio, host of the Frankly Speaking podcast where I answer all your questions, market stocks, economy, sports, anything else you want to throw at me. Greatest podcast. I answer all of your questions. [inaudible 00:00:28] to my Wall Street Unplugged podcast, which I host every Wednesday. If you have any other questions you want answered, just send me an email at frank@curzioresearch.com. That's frank@curzioresearch.com. Make sure you put Frankly speaking in the headline and you never know, your question may be the one I read on this podcast.

Frank Curzio:

So, I'm going to be honest with you. I'm not going to take questions today because I am in the Baltimore studios. The Baltimore people tape my podcast every week and they usually do it through Skype, but we're doing a lot of work for Barry and his launch for the promo and I drove up to Baltimore last night trying to do a very nice thing because a lot of things fell on that day. We ordered new furniture and all of a sudden they said, well, it's coming on Wednesday. And then my wife's like, "Oh, I made an appointment to get my hair done three months ago and that falls on Wednesday." Grant you, it's an 11 hour drive from where I am to Baltimore. And you say, "Well Frank, why don't you take a flight?"

Frank Curzio:

Well we shooting a lot of videos with Barry and everything and I was going to take a flight, but it costs \$1200 and that included me leaving 3:00 in the morning, taking two flights, which is a full two hour trip really from Jacksonville to Baltimore, 2 hours and 15 minutes and getting here at 11:00 AM just in time to really shoot a lot of videos and things that we're doing with Mary, which will need to do studio. So I drove here last night, had some fun. It's pretty cool. Listen to games, making my phone calls, but it's been pretty crazy. Now, I'm just sitting here actually having a beer, that serious,

and we just finished shooting a lot of these videos with Barry and it was great and we have a great host and you're gonna see a lot of this stuff and yeah, I wanted to give you a little bit of behind the scenes, right, of what goes into a product.

Frank Curzio:

You'll say, "Well frank, you're going to launch this product and it's taking a little bit longer than expected and you know, why is that?" And we're launching something called crypto intelligence and I went out and hired the best crypto analyst in the industry and it was important because this industry is really crazy. It's really speculative. And I hired him I believe around six months ago and that's a long time. I mean we could easily get a product out within two to three months. Again, there's a lot of details, right, so giving you reports, we want to make sure we're including everything in the product. We want to just get some feedback sometimes for our best subscribers and what they would want. And then a product like this, what they're not seeing out there in a crypto industry. It's very difficult guys. I mean this is an industry that's difficult for me to understand because it's ever changing. I mean even if you use coins, like Coinbase just changed their limited 10000 out of nowhere over the past couple of weeks.

Frank Curzio:

We're shooting videos on how to open different accounts, like on crack in and you know, just different exchanges. Right? Because Coinbase only trades pretty much the top coins, it doesn't [inaudible 00:03:19] a little bit more, but when you're looking at some like cracking is a really good exchange and they trade hundreds of coins. And it's a good site but you have to understand how to open this, how to fund the account. Darian Wallet has bitcoin wallet. So we've done educational videos from scratch, let you know exactly how to do this. So when you look at the crypto market, Barry's pretty adamant again about this because he saw more regulation coming in when people see regulation, right? Bitcoin supposed to be where you turn to because you don't want to deal with the regulation. You don't want banks to keep records. They charge fees for everything for being the middleman and not even do anything. Right. They just, you know, just being the handshake in between you transferring money, wiring money someplace. Right. And they charge a fee.

Frank Curzio:

Bitcoin was created in 2008. Good timing during the credit crisis, just in case if the financial systems shut down, which sounds like that's not gonna happen. Well it almost happened and you can say what you want about the Fed and injecting money and they should let everything fail. If they fail, it probably be 60 percent unemployment rate right now. We're talking about every financial

institution collapsing. No, I mean GE couldn't pay their employees on it. You are looking at something that was absolutely massive. Tax payers were there had to bail them out. We get it. I'm not saying I agree with it, but the alternative you think about is pretty crazy. Okay. How far to the right to left y'all? Whatever. It's nuts.

Frank Curzio:

So here's a method of digital payment. Bitcoin. Think about China. Imagine if you have a gold in China, we're going to carry gold bars out of the country. If you have cash, how do you get out of the country? Well, bitcoin's one of the ways. That's why China's crushing down on it. It's a way to get your money from one place to another without carrying three bags of gold on a plane with you, which you're not gonna be able to do these days, at least for most countries. But we look at more regulation, people get worried, especially where we see more regulation? We saw in the financial sector. Dodd Frank is scaling that back. They need to scale it back. Some people that don't know the industry would say, "Frank you're an idiot for saying that, look what happened last time."

Frank Curzio:

Look, we went from zero regulation to insanely crazy regulation. When I go to buy a second house and I have enough cash in my bank to buy the house five, six times over and they're saying, well we can't give you a loan because we need to see your taxes and we start a business, we're doing pretty well and now will, you know, you need to use different programs you need to use, you have to hire better accountants. It's like a real business now and everything just came out of nowhere and we're very happy with demand. I'm humbled by it. So we had a delay it for a little bit. Now everything's up to date and great. Now moving forward we have all the right programs in place. It's like having the right IT system, right? I mean there's IT systems for a company that generates a couple of hundred thousand dollars and even cloud services, right? For companies who generate millions in cloud services for company to generate know \$100000000. It's just massive differences between that. The capacity, how much you could hold, just everything.

Frank Curzio:

But the regulation when it comes to financials is insane. I mean it's over the top. There's people there with money that want to borrow because interest rates are low and they're not letting you. So you need to dial that back a little bit. But regulation is such a bad word. People get nervous about it. So what happened at bitcoin? It went to 19000 and you see China, Japan coming out against it and you just ... And Barry was adamant about it. He was on my pocket. You go back and listen. We got a lot of regulation.

I think the market's going to come down, it's going to come down a lot and that's come down a level that's great. You said, well, the regulations going to come, that's going to crush it guys. It's not going to crush the industry. It's crushing it now because there's overreactions, people don't understand. For me over the past 12 months learning about this industry and seeing the ICO that have come out. I'm not kidding. The white papers are from kids that say we're going to do this, we're gonna create some kind of thing that timestamps for insurance companies and they highlight how the insurances hundreds of billions of dollars industry and we're going to penetrate this market

Frank Curzio:

There's an ICO, I don't know if it came out yet, that said that's going to allow people through their phone to take pictures of cars and license plates and basically see if they have ... I don't know how it's working. Yeah, just tickets outstanding or whatever it is, where you know, they can get told and repossessed and stuff and all this was going to be timestamped automatically. And that sounds like a good idea until someone takes a picture of a car and then the other guy gets out with a bat and beat the crap out of him. I don't know if that's a good idea for an ICO, but some of these ICO, they're not a necessity. Could it be cool if your timestamp things using blockchain you have better security measures? Yeah, but it's not a necessity and people aren't gonna run to it.

Frank Curzio:

We look at the ICO market and just some of these things with dodge coin and things. I was a \$2000000000 and even the guy around it was like, this is crazy. The money that's being raised from a piece of paper which we're known as is at prospectus in this industry. It's a white paper with an idea and this idea highlights how big this industry is. They're going to capture a percentage of it, which they're not. And the gains you can make it. It's showing out what bitcoin did from \$2000. You don't realize bitcoin was like 2000 at the beginning of 2017. It's 7500 now. People aren't focusing on that because it was 19000 when in December and now 7500. Wow. This is a currency. How could that happen? This is crazy. This is nuts. But seeing some of the crap out there, it has to get regulated.

Frank Curzio:

And what happened during the Great Depression? A massive collapse and all assets was unemployment was over 30, 35 percent, wherever it was back then. It was insane. So it was created the SEC. Why? To make investors more confident to protect them and the things that they invest. Right now, it's difficult to raise money in the US for an ICO. It's changing. The

SEC is actually working with companies in the industry where if they think you're doing wrong or something wrong in a business, they'll come in, they'll shut you down. You can't send out marketing material. We need to audit everything and have someone sit right in the middle of your office. That's different. They're actually looking at companies and saying, okay, this is what you're doing. All right. No, no, no. You need to do this. And then the companies are complying and say, okay, we get, we want to work with you because of your real company and find a real application where blockchain works, you're gonna make a fortune.

Frank Curzio:

Why wouldn't you want to work with the regulators? You want to be smart about it. It's like the marijuana industry, it's like gambling. If you have a business, I mean people love to gamble. If you have an online poker site that wasn't a Ponzi scheme and say, hey, we can get millions of people will come here, play poker, we take a percentage of it and people love it. They don't mind. They're going to pay whatever, it works. Everybody's happy. It's cool, fine. Regulate me. Here's my profits. I'm paying taxes. Everything is cool. You don't want overregulation where it's crazy and in order to get a license to start online poker it takes you three years and stuff like that. It's crazy, like to open up a casino, whatever. You need to be on the inside for things like that.

Frank Curzio:

When it comes to blockchain and crypto currencies and stuff guys, I mean you need the regulation because investors have to be confident investing in something, knowing that if that guy just leaves the country or whatever, he's going to go to jail for 20 years. Right now, they're not even going to chase him because there's no laws. Oh, you're an idiot for putting your money in that. That's kind of stupid. There's no laws. So what is that resulting in? Well, a lot of scams. I mean look at the uranium industry, what 15 years ago to not even 15 years ago. It was at four or 500 companies had uranium in their name, now is like seven or eight. And if you look at the [inaudible 00:11:14] industry, [inaudible 00:11:16] is a joke. Whatever is hot because everything's been so bad. Lithium, cobalt, whatever's hot and that's the name of the stock. It's like marijuana. Same thing. But you need this to be regulated because you're going to have, not to curse here, but you gonna have assholes take advantage of the system and trying to make a quick buck, which is sad, but that's in every single industry until it gets regulated.

Frank Curzio:

It's like when you live on a corner and you hear screeches all the time and there's no light there and there's almost an accident and you call whoever and say I think they should be a light here. They're not going to put a light there. You know, we're going to put

a light there when someone gets killed, like, okay, yup, yup. This guy got killed. There was three accidents here in the past couple of weeks. All right, we need to put a traffic light up here. Reactionary, not proactive. They do the things before, do things after. So now you're seeing a lot of these scams come out and now the SEC is all over it and that's going to be a great thing for this market. A really great thing for this market.

Frank Curzio:

So we are looking at newsletters and launching this thing. I mean it's a whole big production. We have a whole team working on it. It was fantastic. Where the entire day at the studio of Barry's getting interviewed by a host and you're going over everything about cryptocurrencies. We created videos in my office, which he came down again, very simple videos. Why? Because this industry is difficult. It's not easy. People don't understand it. It's difficult to understand. I mean, how do you fund the account? How to open a theory on why or what a bitcoin wallet. How do you open an account of crack in, how do you trade whatever we're going to recommend in that newsletter. All of this needs to be done because as a publisher, the last thing I want to do is get you excited about a product and you get into it and you're like, I don't know what's going on. How the hell do I do this?

Frank Curzio:

It's like getting a piece of furniture. Unfortunately I've experienced with this, but my wife, she's awesome, but she's like, hey, here you go. Can you put this kitchen together? Like on Christmas Eve, can you put this kitchen to get. I forgot I got, it's in the garage. It weighs like 110 pounds and I bought the first piece and it says number 69. I'm like, are you kidding me? So yeah, it's taken me the whole entire day to do this. I'm like, I thought it was going to be pretty easy to put together. You get excited to put that thing together for my kids. But anyway, coming down here on Wednesday and there's just a lot of stuff going on. I was nice. I said, look I've been working really hard to launch this product. I tell my wife don't change your appointment, make sure you get your hair done, look pretty, be great.

Frank Curzio:

This and that. And of course it was supposed to be like two hours and it took like three and a half, four hours and someone was late and I'm like, hey honey, it's 3:00 right now and I got to drive 11 hours so you know, getting to the Baltimore Street, got in here at three in the morning and then I woke up at seven and 8:00 and came here and then we taped all these videos and stuff and I'm just hanging out, chilling, having a beer, which I'm drinking right now, but I wanted to go with you just how the launch process happens and I'm glad Barry's like that because we could have

launched this product at a time where it was really exciting. Even December. They were hired in September, right? December was a great time to launch this product in terms of a marketing angle, but as a publisher, right, as Curzio Research, what is that going to do for me?

Frank Curzio:

It's going to generate more money? It's going to generate more money quickly. I think that's what we seen as industry a lot. Oh, let's take advantage of this trend, but you know, when you burn your clients like that, what happens? Well, they're not going to believe everything you say anymore, right? Because the end game is really to get you in here and be a part of this company for the next 20 years and subscribe to a lot of our products. That's the goal. Things that are going to excite you, ways we could make you money, but we want to get in these trends at the right time and looking at cryptocurrencies right now, Barry was right and now it's come down to the point where it's amazing. I mean it's going to launch this new product, but the whole production behind it, the IT, the videos that go up, the writing that goes behind everything.

Frank Curzio:

I mean it's a really cool industry because someone from me ... I was an analyst in this industry for 25 years. I worked at Stansberry I think for five, the street before that for another five, but it Stansberry was one of the best experience for me because I learned the marketing angle and how to market products. You'll get your name out there because you can be really great at something and if you don't market, no one's gonna know. Learning all this production and things like that. And I mean, I never had appreciation for it as I do now that I'm running a company because there's a million moving parts, right? Me, I used to write my newsletter and I used to write a package. I used to have to tape it and it goes out to you guys and it's kinda like hey, how's things going.

Frank Curzio:

I never realized is 30 things that are going on behind the scenes to really make this happen because it's all about the user experience. And when I first launched this business, you have people that follow you for a while, just like if you launched your own business, right? Everybody who launches their own business usually does well early on because you have the people that love you the most are gonna subscribe to your stuff, which is normal, right? I mean they like your brand or whatever, but to grow a business, you got to explain it to people and get your word out there to people that don't know who you are. I don't care what businesses or how popular are, 99 point nine percent of the world doesn't know who you are. They're seeing you for the first time.

Frank Curzio:

So we take that into consideration where, okay, you're seeing us for the first time, you're going to subscribe to our products and that's the handshake, right? For us, that's where it starts. And a lot of other people like, well it's a sale, that's kinda like where it ends. We got you. No, for us it's like we want to fulfill all the promises that we're giving you for the reason why you subscribed to our products. And that's important. So we subscribe to this cryptocurrencies. Do you know how hard it is to open up an account? It's hard. So we got to create videos. Once you have access to Barry, if you're subscribing to that newsletter, be able to answer a questions, him doing live video sessions, going over things. And here's how you could by my next recommendation, here's how you get into the ICO, doesn't try and exchange it trays on this exchange, so here's a video exactly how to open an account in this exchange because it's not easy.

Frank Curzio:

And one exchange that we did a video on, it was funny. There's different levels. Tier one, tier two, tier three,. So we need to tier two access and we got tier two access and then one of the emails said, well, you need tier three access. And tier three I think just allows you to transfer whatever bitcoin from one account to another account and a higher limit or whatever it was. And the company, the firm, actually sent two emails. One said, hey, you're ready to go. And the other one said, well you need tier three. And when we went on, we only went up to tier two. We were not able to sign up. I said, Barry is this, right?

Frank Curzio:

He's like, that's how crazy this industry's. It's brand new. He's like, you have this department that they don't even know what's going on. I mean, it's a trading platform. It's good that they're making tons of money, that they provide a service for you, but you're getting two contradicting emails within a matter of minutes saying we can't trade. And one that says we can trade with the current access. And he goes, in this industry, if you get two people in the room, you get 10 different opinions because it's a new industry and a lot of people don't understand it. So, for me, I want to put someone that's great in [inaudible 00:18:10], going to be able to explain all this, get on camera, show you who he is, and you're going to see how much of a difference that makes.

Frank Curzio:

Because a lot of people out that I'll recommend that ICL recommend this recommend. Now you've seen that 70, 80 percent. The ICOs that we've seen and he showed me it. It's incredible. I mean we look at these things, we're like, there's no way. There's no way. This is such a piece of garbage. And then he'll tell me two weeks later, he's like, yeah, that they raised like

15, \$20,000,000. I'm like, are you kidding me? I mean, they don't have any assets. They don't have any operational experience these kids. They're just taking money. I mean their intentions are good. They're like, "Hey, this is what we're gonna do. We're gonna create this. Create exchange, create that," but it's absolutely insane this industry, but what I do know about this as someone who's followed trends all their lives, it's pretty incredible at getting at this stage. Could bitcoin go to a thousand? Absolutely. I don't have a crystal ball in front. I wish I did. If I did, I won't be doing as podcasts right now. I'll tell you what I'd be doing: lots of fun stuff.

Frank Curzio:

But I can tell you in this industry particularly, there's amazing uses for blockchain and some of those uses are coming on. Barry's found one already that he believes something that's going to replace bitcoin. That's going to be the first recommendation. I mean, it's very exciting when you hear about it. It's just code that's not in Bitcoin that's in this other coin. There's a reason why a lot of banks are using this and starting their platforms with this and things that I'm learning for the first time. That bitcoin isn't as anonymous as you'd think. It's not. It's an open source platform. For banks, that's terrible. Well, you can see different transactions. Yes, it has some kind of security, but you need more laser security, which other tokens are coming out and other coins were addressing this.

Frank Curzio:

But there's so many new things and new features and things that make sense in this industry. Cybersecurity and financials, real estate, insurance. It's going to impact so many industries and people are like, well, I don't see the application. You will. It's fascinating. That's why you see a lot of the money come in. The conference in New York, which was what last month, I believe. Barry attended. Expensive. Yes, I paid for it because he needs to be there because the Miami conference was a crap show. I mean you've seen girls in bikinis and 18-year-old pull up and Lamborghini. It was a joke. He was laughing. He's like, you gotta see this is amazing. Barry's been in the industry and the Hedge Fund and for 25 years, this is insane. The New York conference was different. Institutions.

Frank Curzio:

And think about it, guys, think about this for a minute. Okay. The institutional interest is so much greater than the individual investor interest, right? You're seeing crypto currencies. There's almost no institutional interest, but that's coming. Once the regulations come, you wonder why all the major companies, all the major banks, what do you think is going to happen to some of

these cryptocurrencies when the institutions get it. All brokerage firms signed see futures trading on this. That's that means they believe this market is real and when that institutional money flowing it and it is flowing in indirectly with a creating certain funds for accredited investors that invest in some of these tokens, you're seeing that, but the amount of money is going to get amplified by 10, 20 a hundred times. When you see the institutional money come into this market, that's when these things are really, really going to take off, but you need some kind of regulation, some kind of protection because as an institution, you can't risk other people's money without having those laws in place.

Frank Curzio:

That's very important, but that's what you're seeing in this industry. That's why I'm excited and I usually do this. You're like, frankly speaking, you used to answer my questions and Frank you mentioned my name, people get excited, which is cool, which I think is funny. I'm a regular guy. I had my kids, I was changing diapers. I miss my wife, I work hard and just like you, but I think it's kind of, oh my God, I can't believe answer your question. It's cool. You know, that's why I like to do, but you know, consider I got in at like 3:00 in the morning and it's kinda crazy day and tape and everything. I wanted to get a podcast out to you. I'm gonna be driving all day so it's gonna be pretty crazy. It might be difficult to get it out, so wanted to do this, but I wanted to give you a behind the scenes look of how much work actually goes into launching these products.

Frank Curzio:

You know, it's not just hiring an analyst, hey, here's a newsletter. It goes out. It's a lot more than that. We have to make sure every link works. Everything communicates with each other, that you have every single question, I will look at it and I can look at it and I think someone's going to ask. We need to address that up front because we're not getting a million questions into customer service, but we want to be upfront and say, here, this is what you need to do because we throw out a product there and you don't even know how to invest in it. I mean, how frustrating is that? Imagine buying something you're excited about. You want to invest in it. You don't know how to do it. That's a pain in the ass, but right now everything's coming together about two weeks away from launching crypto intelligence with Barry. Very, very excited.

Frank Curzio:

It's a good opportunity. We're looking at price with cryptocurrencies. I love where they are right now. There's a lot of great ideas. When this regulation comes, you'll see a little bit of a pullback here and we saw Motsa pullback from 19,000, but Bitcoin is pretty close to 10,000. It's between 7,000 to 8,500 I guess over

the past few weeks, but it's at pretty cool levels were, you know what, you can make a lot of money. I'm not talking about buying bitcoin here guys, because that's something you're going to see this industry as well, which we need to see. In this industry, when bitcoin goes down, everything goes down with it. Every single coin, 95 percent of the coins are going to go down, which is crazy.

Frank Curzio:

I mean there's times when we see what the SP 500 maybe down a little bit. Could be down, whatever, maybe a half a percent. You're not going to see every single stock or every single industry down. No. If the market is flat, I mean, you know, you have Netflix or Google or Facebook. If those companies are killing it, you're going do great. In this market, you could have certain coins at hey, these are established companies and starting to generate revenue. Yet if bitcoin crashes, these things are so leveraged to bitcoin. It's crazy. Some of these guys are raising money through bitcoin and they're not transferring it to cash. They'll leave it in bit coin. Think about that for a minute. How much money has been raised over the past few months of Bitcoin above 10,000?

Frank Curzio:

Are you sure those people raised that money and transfer it and there's ways of transferring it. Barry's going to explain it to you. We can keep it in something that's equivalent to the dollar, but think about some of these kids. They don't know better. I mean, maybe they kept it in bitcoin 10,000. Now you gonna you raise 10 million, now you're down 30 percent just because it's a currency. It's not like you spent this on your business. It's something people don't talk about. This is a pretty insane industry. I'm excited. I'm learning things every single day that goes by. It's a great opportunity because everything is brand new and that means there's an opportunity. Yeah, it's great that it's difficult to invest in this industry because that's going to give you an advantage. I talked about that last week when someone said, Frank, should we invest in what we don't know?

Frank Curzio:

Learn about what you don't know because that means there's not a lot of investors in it yet. What do you say? Wow. I drink coca cola. I know that company. I'm going to buy it. Yeah, you could buy. You do. Okay. They paid three percent dividend. Yay. Okay. Restocking the Dow went down on Tuesday and Coca cola's good for you. High five. But you make the big money by getting into stories before anyone else, so don't get scared of something you don't know. Educate yourself and then make the decision and say, you know, oh yeah, well I did a ton of research on it, but I'm still not crazy about crypto. That's cool, but don't just close your eyes and don't feel like researching the industry and don't take because that's how you lose a lot of money in this.

Frank Curzio:

So people didn't want to invest in shale companies, right? I first recommended them 2010, 2011. Big Data analytics. I mean talking about IOT in 2011, 2012. Skyworks is 20 bucks one over a hundred. I mean, getting into these trends early. Now IoT, everybody knows about it. Everyone knows what big data is. Now AI is a new big thing. To became invested in these things, you want to learn about them early, understand them. So I hate the fact that people point the Peter Lynch, only invest in what you know. You know, what? Learn what you don't. There's no reason with Google while you can't learn everything. Reach out to people. I mean, I know I reached out to people. People love talking about themselves. Ask them questions. They're going to talk and shut up when they're talking. Don't tell about you. So you want to learn as much as you can. You want to learn about this industry.

Frank Curzio:

Have good contacts would be one of the first to invest in it because I can tell you when you posted it on your social media and stuff, there's going to be people that are going to come at you and say, wow, you know more about this industry than anybody else. And next thing you know, you have these big frigging hedge funds contacting you saying, hey, you know, I saw some of your posters, so some of your research and your website, even a lot of good work on this. What do you think of this? What are you seeing in this next thing you know, you become one of the leading experts in the industry that nobody knew only because you took the time and a couple of months to research this industry. That's what we are at cryptos. Don't be scared of what you don't know of.

Frank Curzio:

Provide a lot of great information. Get the right analyst for the job in this crypto intelligence. We're launching in a couple of weeks. It's going to be fascinating. And again, you hit it all this information, you started to get emails. Now if you want get on an email list, just go to curzioresearch.com. We don't bombard you with hundreds of emails. We let you know what our podcast is up, gets special offers and stuff like that. And you know, you'll get a couple hits when we are promoting things. But a lot of great free stuff. I mean, I don't think anyone gives away more free stuff than us and people say I'm crazy for doing that, but in this day and age, that adds credibility, right? I mean, when you come into this podcast and when you see me do live video, you can't fake that. Just getting a newsletter and email, who is really writing that email? Who's really writing that newsletter? Do you even know if they're writing it? Do you even know what positions are in the newsletter? You'd be surprised. You'd be really surprised.

Frank Curzio:

From someone who's an insider, trust me. You'd be really, really surprised. But anyway, some really great stuff coming up. Hopefully you enjoyed this podcast. Let me know. If you hate it, it's perfectly fine. Instead of just pulling some random questions out on a desk and having a beer and just kinda looking at information or getting the proper information to you about those questions is so, you know why? Let me do some. A little differentiate, a little background. The hard work that we do, because it's always working 15, 16 hours a day for you guys. Try to get the best analyst in front of you, curzio research, the best products, and that's why I'm really excited about this. So a lot of free information, a lot of great stuff coming in cryptos. You're going to have access to Barry personally to answer some of your questions.

Frank Curzio:

So really fun stuff coming up over the next couple of weeks. And if you want to subscribe, it's going to be really, really ... Guys, I'm not kidding, an amazing offer, a much lower than the prices that we charge for all of our back ends, which is Curzio Venture Opportunities. And also money full trader is a much, much better deal. We wanted to make it affordable for everybody. We're gonna offer that just to you guys for the first week before we really market this thing to outside list. So it's going to be a fantastic building show. You agree with all the information you get and more important you're going to get access to Barry's first pick, which I'm very, very, very, very, very excited about so, and I don't say it often, but this is something that's really cool. I mean, you read the research behind it, it just makes sense.

Frank Curzio:

You seen the biggest banks in the world actually adopt this thing and this particular coin is worth one 100th of what the value of Bitcoin is right now and considering that it could replace ... Even if it only goes up a tenth with 10 time gains, a thousand percent. Yeah, that's amazing. But these are the returns you could generate in this industry. It is a speculative industry that you want to get educated on it and learn more about and that's what we're doing with this product. So some of it's very, very exciting. If you guys have any questions, fran@kcurzioresearch.com. That's frank@curzioresearch.com. And again, hope you guys love this podcast. A little bit different, but I'm going to share some of the things I've been doing since I'm about to finish this beer, grab some dinner, and drive 11 hours home, which should be pretty cool. So guys, that's it for me. Have a great weekend. I'll see you in seven days. Take care.
